## **DETAILED ACTION**

### ***Response to Amendment***

1. This communication is in response to the amendment filed December 11, 2009. Claims 2 – 3 and 8 – 31 are canceled. Claims 1 and 4 – 7 are presented for examination.

### ***Claim Objections***

2. The objections to claims 18 and 24 – 28 are withdrawn based upon the changes made by the Applicant in the amendment submitted December 11, 2009.

### ***Claim Rejections - 35 USC § 112, 35 USC § 101, and 35 USC § 103***

3. The rejections under 35 USC § 112, second paragraph; 35 USC § 101, and 35 USC § 103 (a) are withdrawn by the Examiner based on the changes made by Applicants to the claims.

### ***Allowable Subject Matter***

4. Claims 1 and 4 – 7 are allowed. The following is an examiner's statement of reasons for allowance:

The primary reasons for the allowance of claim 1 is the inclusion of the limitation in the claims, which is not found in the prior art references, a method of providing a data processing system accessible to a plurality of users over a network where a computer program executes the steps of (a) receiving a request for medical information of a patient from a remote user, (b) obtaining medical data representing physical conditions associated with a patient including the names of medications recorded in the patients medical history and names of all physical conditions known to be treated by the medications, (c) identifying probable disease/drug contraindications and further identifying the contraindications as significant or non-significant, (d) generating a list of physical conditions that are not associated with contraindications and physical conditions associated with non-significant contraindications, (e) identifying consequential information associated with medications currently used by a patient, including significant and non-significant side effects, significant and non-significant drug-drug interactions, and therapeutic

Art Unit: 3626

classes, and (f) outputting to a remote user via a network a generated list of physical conditions and the identified consequential information.

The closest prior art reference, Knowlton (U.S. Publication Number 2003/0204415 A1) teaches a medical data and medication selection and distribution system in which caregivers can remotely access a network system in real time using a personal computer or PDA, to obtain the medical history of a patient including medication history (paragraphs [0043] and [0053]). The medications associated with a patient are profiled, including prescribed or over-the-counter, continued or discontinued medications (paragraph [0095]). A MUGS (Medical Use Guidelines) database is searched using drug names and matching treatment protocols of the drug will be listed (paragraph [0130]). The processors of Knowlton's invention can access the databases of remote systems (paragraph [0048]).

The prior art reference Ghouri (U.S. Publication Number 2004/0162835 A1) teaches a system and method for generating patient-specific prescription drug safety instructions in which recognized medical therapies, including an indication of absolute and relative contraindications are compiled in a "Rule Book of Medicine" (paragraph [0074]). A newly prescribed patient medication is evaluated against the patient's database elements and interactions between the newly prescribed medication and patient's existing medications, diseases, allergies, and conditions are identified (paragraph [0017]).

Originally numbered claims 4 – 6 and 7 are dependent on originally numbered claims 1 and 4, respectively and therefore incorporate the allowable features of originally numbered claims 1 and 4 through dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 3626

In related art, Munoz et al. (U.S. Publication Number 2002/0052760) teaches a patient prescription historical database, prescription request refill, drug delivery, dosage, and patient identification.

In related art, Feeney et al. (U.S. Publication Number 2002/0032582) teaches a method of medication tracking using a database, which can maintain prescriptions. Also includes the entry of scripts, inventory management, and receiving electronic prescription information.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and is not of particular significance. These prior art patents fail to teach or fairly suggest of a method of providing a data processing system accessible to a plurality of users over a network where a computer program executes the steps of (a) receiving a request for medical information of a patient from a remote user, (b) obtaining medical data representing physical conditions associated with a patient including the names of medications recorded in the patients medical history and names of all physical conditions known to be treated by the medications, (c) identifying probable disease/drug contraindications and further identifying the contraindications as significant or non-significant, (d) generating a list of physical conditions that are not associated with contraindications and physical conditions associated with non-significant contraindications, (e) identifying consequential information associated with medications currently used by a patient, including significant and non-significant side effects, significant and non-significant drug-drug interactions, and therapeutic classes, and (f) outputting to a remote user via a network a generated list of physical conditions and the identified consequential information.
